ADVANCED EMAIL SPAM FILTER

We recommend using an enterprise grade email filter that scans all incoming emails and identifies and blocks spam, viruses, & non-genuine emails from entering your mailbox. You also have control to see which emails have been identified as spam and can manually to whitelist/deliver to your mailbox. You get an email to your mailbox getting a report of which emails have been quarantined and you have the option to receive it or delete it.

Technical Features

1. It focusses on a defense in depth approach protecting against malware threats, spear phishing attempts, and zero-day attacks.
1. Predictive techniques including Bayesian analysis, heuristics, and machine learning to block new varieties of spear phishing, whaling and zero-day attacks before they reach your mailbox.
2. Heuristic rules to detect phishing based on message headers et al. These are updated frequently to address new threats.
3. Spam email reports sent via Email to each user daily to see which emails have been blocked and give option to manually release/delete the email.
4. Easy synchronization with Active Directory and LDAP.
5. Administered via a web-based portal. No agents required.
6. Spam Confidence Levels can be applied by user, user-group and domain.
7. Whitelisting or blacklisting senders/IP addresses.
8. It is infinitely scalable and universally compatible.

The combination of these features ensures our spam filter protects users and businesses from whaling, spear phishing, impersonation attempts, and business email compromise (BEC) attacks.
